## Criterios de evaluación – Novedades HE

### Same criteria as in H2020

Same three award criteria: '**Excellence**', '**Impact**' and '**Quality and efficiency of the implementation**'. Excellence only for ERC.

### Adapted following lessons learnt

- The number of '**aspects to be taken into account**' have been **reduced**, ensuring that the same aspect is not assessed twice
- **Open Science** practices assessed as part of the scientific methodology in the excellence criterion
- **New approach to impact:** Key Impacts Pathways (KIPs)
- The assessment of the **quality of applicants** is assessed under 'implementation', rather than as a separate binary assessment of operational capacity
- Assessment of **management structures** has been removed.

## Evaluación en una o dos etapas

Research Executive Agency

Probando nuevos procesos basados en las lecciones aprendidas

Right-to-react (Rebuttal) **NEW**

- Objective is to increase transparency, to correct any factual or major misunderstandings by experts at an early stage, and provide more detailed feedback to applicants.
- Applicants will send their reactions to draft experts comments
- Experts will take applicants' reaction into account before finalising their final assessment.

Probando nuevos procesos basados en las lecciones aprendidas

Blind evaluation (in 1<sup>st</sup> stage) **NEW**

- There is no evidence that the current proposal evaluation system is systematically biased.
- There are understandable concerns that evaluation experts may be swayed – perhaps unconsciously – in favour of proposals from well-known organisations in countries with better performing R&I systems.
- 'Blind' evaluation is a way to remove any real or perceived effect of such reputational bias.
- Experts evaluate without knowing the identity of participants.
- The work programme will include an additional admissibility criterion: applicants can not be disclosed in the narrative part of the proposal.

# El concepto “multi-actor approach – MAA”

<b>Eligibility conditions</b>	<p>The conditions are described in General Annex B. ....</p> <p>The following additional eligibility criteria apply:</p> <p><b>The proposals must use the multi-actor approach.</b> See definition of the multi-actor approach in the introduction to this work programme part.</p>
-------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Pag 19 -21 Specific requirements for multi-actor projects:

- Multi-actor approach is a form of responsible research and innovation RRI,
- Aims to make the R&I process and its outcomes more demand-driven, reliable and relevant to society.
- More than just widely disseminating the results of a project, or listening to the views of a board of stakeholders.
- Genuine and sufficient involvement of a targeted diversity of actors, (end-) users of the project results such as farmers / farmers' groups, foresters / foresters' groups, fishermen / fishermen's groups, advisors, food processors, businesses, consumer associations, local communities, citizens, civil society organisations including NGOs, government representatives, etc.
- All over the whole course of the project: from participation in project planning and experiments to implementation, dissemination of results and a possible demonstration phase.
- Building blocks for the project proposal are expected to come from science as well as from practice and from intermediaries: it is a 'co-creation' process. End-users and practitioners are to be involved, not as a study-object, but to use their practical and local knowledge and/or entrepreneurial skills to develop solutions and create 'co-ownership' of results for (end-) users and practitioners.
